

Step 2c - Sensor installed on a platform without internet connection (Your data transmission)

Your sensor is installed on a platform without any data transfer during the measurement period. Let's say the sensor is working offline, e.g. as a mooring. At the end of the measurement periods the internal data storage, the sensor or the whole platform will be recovered to retrieve the data.

1. Arriving at AWI the data has to be copied by **your** staff . Therefore you can use a "[O2A ingest submission service](#)". Please use the video tutorial for this step:

Your browser does not support the HTML5 video element

2. Up to now the data are ready for the archiving procedure.

Now it is time for [step 3...](#)
