

VCS Satellite System

**Attention:**

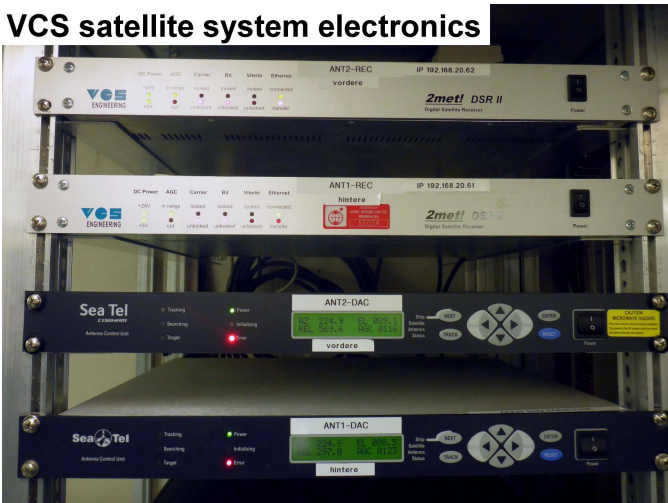

The system is run by the [Weather Station](#) (DWD). Scientific co-use is possible according to prior agreement with AWI Logistics / Principal Investigator.

Summary

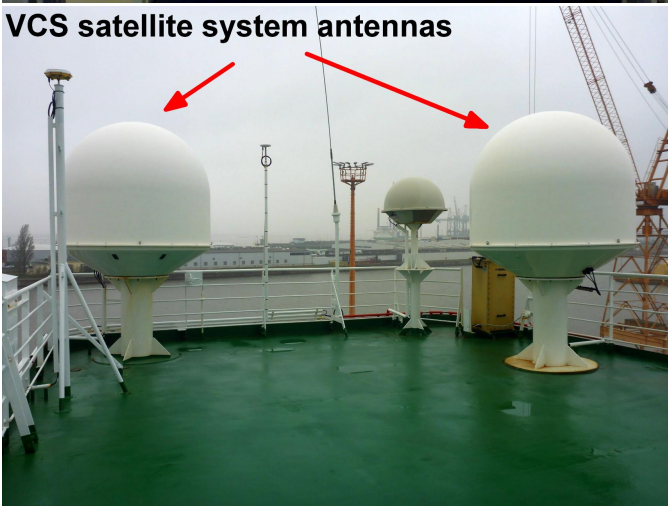

The VCS satellite system is used to receive images from NOAA, FENGYUN and METOP satellites. The system is redundant with a backup VCS installed. The satellite images are used for wheater forecast especially for nautical purpose, helicopter flight planning and scientific work planning.

Manufacturer	SCISYS Deutschland GmbH
Model	2met DSRII satellite receiver
Serial No.	n/a
Type	satellite tracking system
REGISTRY-Link	REGISTRY (1404)

VCS satellite system electronics

VCS satellite system antennas
